

## Important Unboxing Instructions

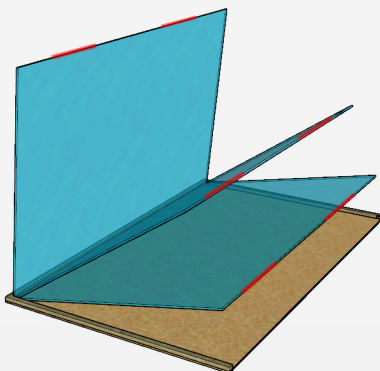

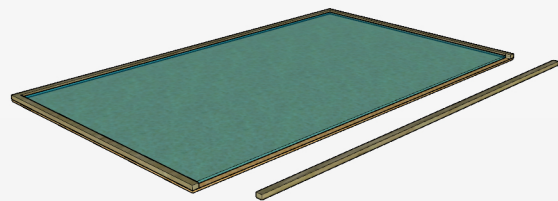

**Step 1** - With the box stood upright, remove the screws along one of the longest edges, on the opposite side of the box to these instructions.

**Step 2** - Gently lay the box flat onto the floor with these instructions facing upward. Unscrew all of the screws accessible from this side.

**Step 3** - Lift / Tip the sheet of wood away, being careful not to drag the wood across the glass.

**Step 4** - Remove the now loosened border piece of wood. This is the same length that was unscrewed in step 1.

**Step 5** - Lift the glass from its now exposed edge, supporting the glass in **multiple places** along the edge to bring the glass upright while being careful to prevent excessive flexing or bowing of the glass.

From the upright position, two or more people can lift the glass up and out of the packaging directly into its final position.

The glass edge should not be placed onto a hard surface as this will cause the glass to break. **If the glass must be stood on edge, use carpet, wood or a similar soft material** to place the glass edge carefully onto.
